

Tired of expensive, ineffective, instructor centered training? Try eLearning!

Have you ever gone to your supervisor and requested training only to be turned down because the travel costs were too expensive? Have you ever attended a class where the pace was either too fast or too slow? Or, have you sat through an entire class without any chance to practice the concepts to see if you really understand them? If you answered yes to any of these questions; you are not alone. These are just a few reasons why eLearning is becoming more and more popular.

In most companies, requesting training has always been an issue. Some common reasons why many training requests get denied include: price of the seminar or workshop, travel costs, and even getting the approval for time off the job. eLearning solves all of these cost issues. Seminars or workshops can cost up to \$3000 per person, and that doesn't include the travel costs. The costs of most eLearning courses are just a few hundred dollars, and sometimes even less. Since an eLearning course is taken over the computer, there are no travel costs. With eLearning, your employer doesn't have to be concerned with taking time off the job, because employees can take their training when it's convenient for them; even outside working hours.

Often times, when attending a class, the instructor will either teach to the highest or lowest level of the student in the class. This results in the pace of the class being either too fast or too slow for some students. In eLearning courses, each student sets their own pace of the course. If the student doesn't understand a concept; they have the ability to go back and spend as much time as they need to review the material.

Many classes and seminars just present the material without really giving students the chance to practice what they learned. It's pretty much a data dump.

eLearning courses are interactive; they get the student involved with using the material. eLearning courses use knowledge checks with instant feedback allowing the student to practice what they learned. ELearning also allows for other user interactivity including simulations and gamification.

These are just a few of the reasons why eLearning is becoming more popular. eLearning is a cost effective, self-paced, and an interactive solution to your training needs.
